## NOVEL PHOTOINITIATORS AND APPLICATIONS THEREFOR

## **Abstract of the Disclosure**

The present invention is directed to new, energyefficient, photoinitiators having the following general formula:

 $X_1 = C \setminus_{M_1}^{Z_1}$ 

wherein of  $X_1$  is a conjugated system such as one or more aryl groups or substituted aryl groups;  $Z_1$  is -O, -S, an alkyl group having from one to six carbon atoms, an ester moiety, a ketone moiety, an amine moiety, an imine moiety, an ether moiety, an aryl or substituted aryl group, a metal or nonmetal, or a metal or non-metal containing group, such as a zinc-containing group or a boron-containing group, respectively; and M1 is an alkyl group, a substituted alkyl group, or forms a five-member ring with  $Z_1$ . The present invention is also directed to a method of generating a reactive species, which includes exposing one or more photoinitiators to radiation to form one or more reactive species. Also described are methods of polymerizing polymerizable materials, methods of curing an unsaturated oligomer/monomer mixture, and methods of laminating using the photoinitiators of the present invention. addition, the present invention directed ink is and resins, compositions, adhesive compositions above-described the using methods of printing photoinitiators.
